Differences between the estimated benefit tails, using original-package classification inference

Characteristic	Largest – smallest	Bootstrap SE	Joint p
Age (years)	**-0.15**	2.87	1.00
Baseline congestion (SD)	**+3.45**	0.06	0 / 499
Female (%)	**-4.00**	4.00	0.63

Joint p values adjust across the three preselected characteristics. Female differences/SE are in percentage points.
B = 499; 0 / B denotes zero bootstrap exceedances, not a population p value of zero.
